

**Quality of Match Selection**  
**“Unique” Number Screening**  
**Waterfall “Value” Processing**  
***Yielding***  
**Reduced Skip Expenses &**  
**Improved Collector Productivity**

Quality of Match (QoM) processing allows each collection agency to select the quality level for processing the matches they want returned. Thus, if you select a QoM of 85, only matches having a probability of being your debtor on an 85 or higher basis, are returned in your debtor file.

**You only buy  
Quality Matches!**

**Recognized  
Both in  
2006 & 2007**

Unique Number Screening provides customers an ability to add a set number of bad telephone numbers within their debtor input file. Thus, should SkipTraceInfo locate a match for your debtor at or above the selected QoM level, and you have already tried and found that number not to be the debtors' number, that number is by-passed as being a match.

**You only buy  
Truly Unique Numbers!**

**Prove our claims against your own debtor files!**
